

## ABSTRACT OF THE DISCLOSURE

An apparatus for a residential low voltage control system. A low voltage controller is adapted to fit into a standard wiring box, and the controller provides isolation/separation of the low voltage wiring from other wiring. The face plate of  
5 the controller, in one embodiment, has a recessed portion with terminals for connecting the low voltage conductors. In another embodiment, the face plate has a recessed portion with an opening for a terminal block to protrude. In still another embodiment, the face plate has an opening for a low profile terminal block to protrude.
